

**Recommendation Set Five:  
Recommendations for ways MSL can help libraries tell their stories through use of  
public library statistics**

The Task Force feels that continued training through webinars and at conferences is needed to ensure that the Montana library community is aware of the tools and materials available to them that MSL has created from the statistics. Particularly, more awareness is needed of the PLDS data that is linked from the Statistics pages. Regular training and communication about the resources is the recommendation. Trainings should include the entire statistics process from start to finish that make the statistics more useful to libraries.
