Letter from the Montana State Librarian

Welcome to the 2015 legislative session. On behalf of the Montana State Library, thank you for your dedication and hard work. You have many difficult decisions to make in the coming months, which, as a librarian, I know can be made easier when you are well-informed. This information booklet, compiled by our information experts, includes data on issues of local and state importance that we hope will be useful to you throughout the legislative session.

The 2015 Legislative Snapshot includes a wide range of information -- from data on crime and demographics to information on education and broadband access to statistics on land and water use. Each of our focus areas significantly impacts the lives of Montanans -- your constituents -- by influencing our environment, economy, and our quality of life. Access to the most current and accurate information is essential to making informed management decisions.

The print snapshot, as the title implies, is a snapshot of information in time. Though most of the data that is provided is the most current information available, data does change. To that end, this year State Library staff also built an online companion to the print snapshot. The online version will provide up-to-the-minute data as it becomes available and will change throughout the session. In addition to providing the most recent information available, you will also have the ability to customize much more of the data presented either by your legislative district or by the counties you serve. We also provide online maps that are fed by dynamic data whenever possible. Finally, in our online version, you will find links to additional resources if you find it necessary to conduct further research. You can easily access the online version by using the link below or the QR codes throughout the print snapshot.

The Montana State Library is a small and very unique agency. We employ not only librarians, but geographers and natural resource specialists and we partner with botanists, zoologists and ecologists. We work closely with federal and state agencies and local and tribal governments. We manage an enormous collection of state government information in all formats, keeping Montanans informed about the work of their government. And we ensure that Montana's blind and physically disabled have access to reading materials and information.

We also work on behalf of all of Montana's libraries to help them provide the latest and best information, technology and library services to their patrons -- your constituents -- whether it's downloadable ebooks, public access computers, online information resources, or the latest bestseller. Without the Montana State Library, Montana libraries would not be able to afford these resources and services for their patrons. Montana libraries are reintroducing themselves to their communities and our communities are better for it. Learn more at otlMontana.TUMBLR.com.

We created this booklet for you to provide vital information to help you make difficult decisions in the coming months, and to demonstrate the power of what a diverse staff with amazingly diverse skills can do to make information, in many different forms, available to every Montanan. Our work empowers Montanans by providing access to information, enhancing learning in families and communities, and building 21st Century skills. Knowing that our work makes a difference makes us very proud.

We hope that you use this Legislative Snapshot throughout the session. And we hope that you will stop by to see us -- in person or virtually. Whether you visit us at our library or online, you will be able to browse our collection of government and natural resource information, get help to research a specific issue, or find a quiet place to work or meet with colleagues. We are located one block east of the Capitol, behind the Montana Historical Society, at the north end of the Joe Mazurek Justice Building. And of course, our services are available 24 hours a day, seven days a week at: <http://msl.mt.gov>.

Sincerely,

Jennie Stapp
Montana State Librarian

Montana's economy has been outperforming the national economy since the turn of the century, including having better performance during the 2007 recession and a faster, stronger economic recovery exiting the recession. Montana's outperforming economy is evidenced in nearly every economic metric: Montana's unemployment rate has been lower than the U.S. unemployment rate since the 2001 recession and has remained about 1.5 percentage points lower than the U.S. rate throughout 2014. Montana has the 8th fastest GDP growth among states over both the last five years and ten years (ending in 2013), and Montana's GDP growth was faster than the U.S. average in every year since 2000, except for 2012. Montana's personal income growth has also outpaced the national average, ranking as the 6th fastest over the last five years and 7th over the last ten years. Montana has the fifth fastest wage growth among states for both the five and ten year timeframes. Montana's economy is healthy, posting above average job growth and improvement in all economic indicators.

However, not all areas of the state have performed equally. In general, the Eastern region has posted rapid economic growth in the past decade, with rapid expansion of employment and rising wages for many counties affected by the development of the Bakken oil fields. Many counties in the eastern edge of the state have experienced

the very low unemployment rates indicative of worker shortages. The Northwest and Southwest regions of Montana experienced strong growth leading up to the recession, but the concentration of construction and wood product manufacturing employment resulted in significant contraction during the national recession. Both the Northwest and Southwest regions lost over 8,000 jobs during the recession. While the Southwest region rebounded quickly, the Northwest suffered through an extended recession and still has elevated unemployment rates. Montana's seven reservation areas also posted economic growth for the last decade, but remain some of the most

economically sensitive areas of our states, often with unemployment levels two to three times higher than their surrounding regions. **Figure 1** illustrates the 2013 unemployment rates in the five labor market areas of Montana, along with the seven reservation areas.

Montana's strong economic growth has not yet been enough to raise Montana's wage and income levels up to the national averages. With an average annual wage of \$37,575 in 2013, Montana ranked 47th among states in average wages in 2013, ahead of only Idaho, South Dakota, and Mississippi. Montana performs better comparatively in terms of income, ranking 35th for personal income per capita among states. Personal income includes income from business ventures, rental payments, royalties, social security, government transfer payments, and other sources in addition to wages. Montana's high rates of entrepreneurialism and business ownership improve our rankings for income compared to wages.

Montana is in this position of low wages and income compared to other states partially because of the slow income growth in the last half of the 20th century. **Figure 2** compares real per capita income in Montana and the U.S. using all available data back to 1929. Per capita income measures the total amount of income received in the state divided by the

Figure 1 2013 Unemployment Rates in Five Labor Market Areas and Seven Reservations

Figure 2 Comparison of Montana and U.S. Real Per Capita Income in 2005 Dollars

Source: Bureau of Economic Analysis. Calculations and deflation by the Montana Department of Labor and Industry.

Montana's Economic Performance

population, providing a measure of relative wealth that can be used to compare to other areas. Figure 2 illustrates that per capita income was relatively equal in Montana and the U.S. from 1929 to about 1952, with Montana's per capita income being higher than the U.S.'s per capita income for a short period from 1946 to 1952. From 1952 to 2000, the U.S. per capita income rose faster than Montana's, creating the large gap in income levels that our state is now trying to overcome. However, Montana has been on the right path since 2000, with wage and income growth faster than the national average, narrowing the gap between Montana's and the U.S. per capita income levels.

It is difficult to isolate one cause for the slower growth of Montana's economy during the second half of the 20th century. Some economists contribute the decline to "the natural resource curse," which is a phenomenon where economies concentrated in natural resource industries (such as agriculture, mining, and petroleum refining) have slow long-term growth rates despite the infusion of capital into the economy from natural resource development. Other economists note the slower growth in the early 1980s corresponds with the closure the copper mine and smelter in the Butte and Anaconda area. Even others point to the slow adoption of computers and technology in the Montana economy compared to the more rapid adoption in the U.S. economy during the 1990s. The adoptions of desktop computers and technology advancements in the 1990s resulted in large productivity gains for the U.S. economy, driving up workers' wages and income levels. Some data suggests that Montana lags behind other states in the adoption and use of technology, and as a result, has lower productivity levels than other states. In actuality, all or none of these factors could have slowed Montana's growth in the latter half of the 20th century.

The diversification of Montana's economy over the last sixty years has also influenced the composition and performance of Montana's economy.

Figure 3 illustrates the changing roles of industries in the composition of Montana income since 1930. Like the U.S. and other developed countries worldwide, Montana

has become more of a service-based industry over time as consumers have demanded more services than goods. The goods-based industries of manufacturing, construction, mining, and agriculture now comprise about 24% of Montana's personal income derived from work. The goods-producing industries are still expanding in terms of the value of their products, generally increasing production value in real terms over time, but their share of the overall economy has shrunk because the service-based industries are growing at a faster rate than the goods-based industries. This trend is expected to continue as Montana builds its post-industrial economy.

Although the service-based industries are often described as low-paying industries with undesirable jobs, like retail or tourism jobs, the service sector also includes high-paying, high-skill jobs that require advanced degrees, such as those in the professional services, health care, or financial services industries. Service-based industries also contribute to Montana's exports, bringing new money into Montana from the sale of their services, and make a sizable contribution to our state's GDP. For example, financial activities is a service-based industry that includes banks, investment firms, and insurance agencies. In 2013, the average wage for the industry was over \$55,000, and the industry provided 17.3% of Montana's total GDP – more than any other industry.

In general, greater economic diversification is associated with faster and more stable economic growth in the long-term. The movement towards the service-based industries has increased demand for well-educated, high-skilled workers, especially in industries like professional services and health care. While it is difficult to directly compare the rate of diversification, Montana's economy may have lagged behind the national economy in the movement to a service-based industry, which could have contributed to the lagging income growth in the second half of the 20th century.

In terms of the current industry mix, there are some differences in the types of industries in Montana compared to the U.S. that may help to explain wage differences. However, the differences are too minor to fully explain the lower wages in Montana or the cause of the lagging growth over the last half century. For example, when compared to the U.S., Montana has a slightly higher concentration in the lower-paying industry of leisure activities (which includes many tourism type businesses such as hotels, bars, restaurants, and ski resources), and a lower concentration in the high-tech, high-paying professional services industry. The differences in these industry concentrations could be used to explain Montana's lower wages. But there are also industry mix differences that would suggest that Montana should

Figure 3 Share of Montana Personal Income by Industry

have higher wages than the U.S., such as Montana having a higher concentration than the U.S. in mining and healthcare, both high-paying industries.

Figure 4 illustrates Montana's 2013 industrial composition using three different economic metrics – GDP, work earnings, and employment to help demonstrate the relative size of Montana's industries and the differences in how each industry contributes to the economy. Financial activities was the largest industry for GDP, followed by the government and trade sectors. GDP measures the overall value added by the industry for economic activity, and can be thought of as the value of sales minus the costs paid for non-labor inputs. Wages earned by Montanans are included in GDP because they represent the value of economic activity added by workers to the production of goods and services in Montana.

Compared to the U.S., Montana has a much smaller share of manufacturing (12.5% in the U.S. compared to 7% in MT). However, larger concentrations in agriculture, mining, and construction make up this shortfall, leaving the goods-producing industries in Montana as roughly 24% of GDP (slightly higher than the 20% of U.S. GDP that lies within the goods-producing sectors). Montana's manufacturing is likely stymied by the long distance from Montana to major consumer cities and ports, which increase transportation costs for manufactured goods. The transportation sector comprises a larger share of Montana's economy compared to the U.S., likely because Montana's large size and rural nature requires a lot of transportation to ship our goods to consumers. Montana's

share of health care is larger than the U.S., partially due to Montana's older population (the demand for health services increases as a person ages).

Personal income is also shown in Figure 4. Personal income is the amount of income received by Montana residents as a result of economic activity. Personal income includes the wages and benefits earned by workers, plus proprietor income, royalty income, rents, or government transfers. However, only work earnings (workers' wages, benefits, and proprietor earnings) can be assigned to an industry, so other types of personal income are not included in Figure 4. The largest industry in terms of personal income earned from work (work earnings) is health care and education, along with government and trade.

Finally, the largest private industries in terms of employment are health care, trade, and leisure activities. These three industries combined employ nearly 45% of Montana's workers. Government is also a large employer with roughly 18.8% of employment, most of whom are employed by local governments. Employment represents the primary way that the benefits of economic growth are distributed through the economy, with most Montanans receiving their income from wages instead of capital rents like dividends or royalties. GDP, personal income, and employment all equally measure important elements of the Montana economy, just like all industries are important to the proper functioning of the Montana economy. All industries work together to create a dynamic economy.

In conclusion, Montana's economy is performing well, gaining ground on the national average in terms of wages and personal income because of rapid growth. Continued growth faster than the U.S. average is needed to regain our competitiveness with other states in terms of per capita income and higher wages, which was lost over a long period of lagging growth in the second half of the 20th century. A number of changes occurred in both the U.S. and Montana economies during this time, making it difficult to determine why Montana's economy experienced this extended period of slower growth. Diversification into a more service-based economy likely accelerated wage growth in both the U.S. and Montana. Lagging diversification, and differences in industry mix between the U.S. and Montana, may present partial answers, but they are not the full explanation. Much to the chagrin of policy makers and economic developers, Montana's economy is influenced by an infinite number of factors, many of them that are outside of our control. However, it is within our control to ensure that Montana's businesses and workers are responsive to economic changes and prepared to navigate an ever-changing global economy. This preparedness can be achieved by ensuring our workers have the education and training needed to adapt, prosper, and innovate in whatever situation is presented in the future. In this way, our workforce can become more productive, earning higher wages and greater profits for the Montana economy.

Demographics

Montana's population

Highlights

- Montana's total population estimate reached over one million people in 2012.
- The age group 65 and over is projected to be 23.5% of the population in 2040 (up from 14.9% in 2010).
- Montana's birth rate has been below the U.S. birth rate since the 80s.
- Montana is ranked second among the states for percent of the civilian population 18 years and over who are veterans.
- In the fourth quarter of FY14, there were 124,816 Medicaid enrollments.

Crime

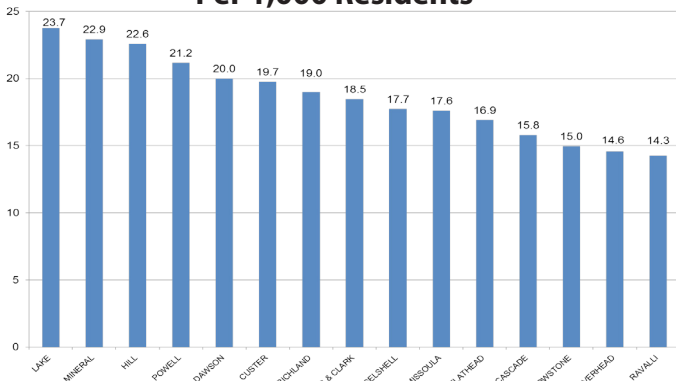

Montana's public safety

Highlights

- Convicted felony offenders cost Montana taxpayers an average of \$65.21-\$70.20 per day while being held in county jails in FY 2012.
- Total number of Sexual or Violent Offender Registry registrants as of October 29, 2014 was 5,711.
- 24.5% of high school respondents rode with a driver who had been drinking alcohol (in past 30 days).

Offender Population Rates by County Per 1,000 Residents

Offender Population Rates by County: Determining offender population rates for Montana counties provides an analysis that corrects for population variances among the counties. For FY 2013-2014, Eastern Montana's Dawson County joined Western Montana counties Lake, Mineral and Powell, and the Hi-Line's Hill County, in contributing offenders at rates of 20 or more offenders per 1,000 residents.

Source: Montana Department of Corrections 2014

County Contributions to Offender Population June 30, 2014

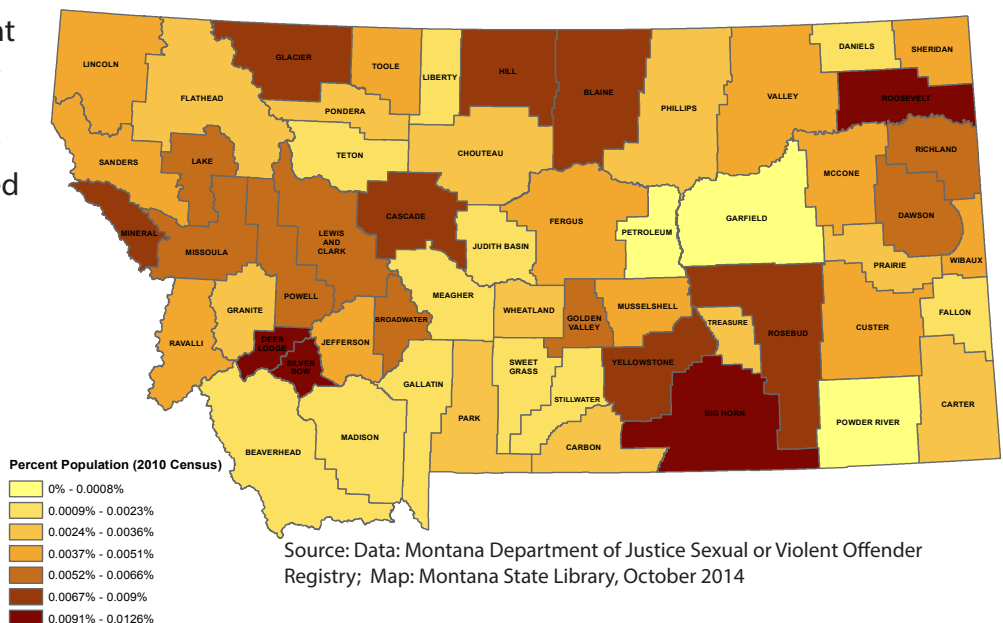

County Contributions to Offender Population: Montana's most-populous counties contribute the largest number of offenders to the corrections system. As in the previous biennium, the five counties with the largest population were responsible for 58% of all offenders counted in mid-2014. The other 51 counties combined sent 42% of offenders.

Source: Montana Department of Corrections 2014

Sexual or Violent Offender Registry

Created by the Montana Department of Justice in 1989, the Sexual or Violent Offender Registry ([SVOR](#)) is a valuable resource for Montanans to protect their families against sexual or violent offenders. Information can be accessed in more specific geographies, e.g. counties, towns and streets.

Sexual and/or Violent Offenders Percent of Population by Montana County

Montana's school funding was restructured in Senate Bill 175

Highlights

- Senate Bill 175 provides an increase in K-12 BASE aid in FY 2014 and 2015. The new money is provided to all school districts through inflationary increases in the per-average number belonging entitlements, a redesign of the basic entitlement, a new Data for Achievement payment, and a new natural resource development K-12 funding payment. The increase in dollars in 2014 from the previous year was \$22,300,405.
- 41% of K-12 students are at schools with enrollments between 250-499.
- There are 824 public schools with a total enrollment of 144,129 in school year 2013-14.
- In school year 2013-14, the nonpublic school enrollment was 8,132 in private and 4,694 in home school.

Early Childhood

Montana is one of eight states without a publicly-funded pre-kindergarten option for four year olds

Highlights

- The Department of Public Health and Human Services has a registration and a license process for different types of child care providers. Over 900 facilities are currently registered and/or licensed. Those facilities have a capacity for over 18,000 children. Visit their website to find child care providers: <http://ccubs-sanswrite.hhs.mt.gov/MontanaPublic/ProviderSearch.aspx>.
- In 2014, Montana adopted the "Montana Early Learning Standards," which guide the work of early childhood professionals to ensure that Montana children from birth to age five have the skills and knowledge they need to achieve success in learning to reach their full potential in life.
- 2010 Child Care and Development Fund estimates put the cost of child care in Montana for an infant at 47% of a single mother's median income and 14% of a two-parent family's median income.

Best Beginnings STARS to Quality

The Department of Public Health and Human Services administers the Best Beginnings STARS to Quality Program, which is a voluntary quality rating improvement system that aligns quality indicators with support and incentives for early childhood programs and early childhood professionals. Nearly 200 programs participate across the state. Participants have access to training to meet the various requirements.

Ready 2 Read

In Montana – perhaps more so than in other states – libraries are community hubs for healthy child and family development. The Montana State Library's Ready 2 Read program helps to educate parents and caregivers about how best to develop language and literacy skills in their children. Montana libraries have a long history of providing free, high-quality educational programming for young children. Montana libraries are also virtually everywhere – from the smallest tribal community to our largest metropolitan area – and they serve communities where there is absolutely nothing else available for young children. Libraries build on how children learn best, by designing and delivering content-rich and play-based experiences that link early learning best practice to books, programming, and collections. Our resources empower parents and caregivers to explore, pose questions, make connections, exchange information and ideas, and instill in young children not only a love of learning, but also the skills for learning.

Montana's broadband connectivity is a critical resource for purposes of education and employment, to access eGovernment services, and to participate broadly in our global world

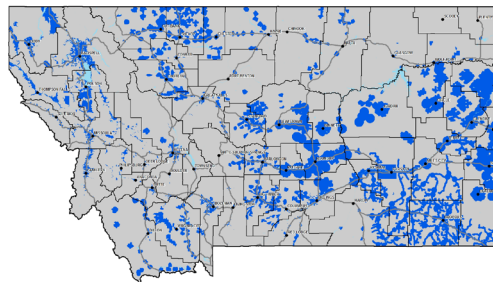

Highlights

- The State of Montana has over 200 services available online, such as driver history records, hunting licenses and unemployment insurance. Visit the online services page at: <http://mt.gov/services/default.aspx>.
- Broadband speeds of 2.4 megabytes per second are required for DVD-quality Netflix streaming.
- Public libraries provide no cost high speed internet for the majority of the state population.
- 2014 concludes the state broadband mapping program, <http://mtbroadband.org>.
- The National Broadband Plan is available at <http://www.fcc.gov/national-broadband-plan>.

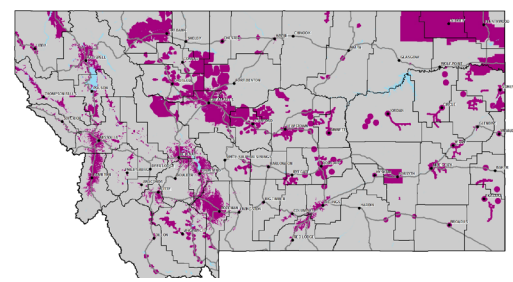

Comparing Data Bitrates (speeds)

Broadband Speed	Use
700 kbps	minimum Netflix streaming
1.2 Mbps	Skype video call
2.4 Mbps	DVD quality Netflix streaming

Libraries

Montana's libraries support education, employment, entrepreneurship and lifelong engagement

Highlights

- Montana's public libraries hold 4,465,788 items.
- Montanans visited their public libraries an average of 4.5 times throughout the year, for a total of 4,655,040 visits in 2013.
- MontanaLibrary2Go (statewide e-book collection) had an annual circulation of 470,030.
- Montana library patrons checked out 6,257,814 items in 2013, over 6 items per capita.
- Librarians in Montana's public libraries fielded 507,416 reference questions in 2013, or 9,758 questions per week.
- The Talking Book Library mail-delivered circulation averages over 213,000 annually; digital downloads average 17,500 annually.
- 100% of all Montana libraries provide Internet access to patrons.
- Nearly half of all Montanans (482,214) have a library card.

Public Libraries Increased State Aid Appropriation

The appropriation for state aid to libraries increased from \$102,830 in FY2013 to \$395,766 for FY's 2014-2017. These dollars directly benefit Montana communities. For example:

- We are now proctoring exams for college students, having health care navigators come and sign people up for health insurance and have our kids learning about computer programming. - Boulder Community Library
- After reorganizing post-retirement staff duties, we were able to upgrade a staff position from a library assistant to a Professional Librarian. We hired a Programming and Outreach Librarian in December 2013. - Imagine!F Kalispell
- The book club sets ...ensure that the cost of buying a new book each month will not deter a student from participating. - Joliet Public Library
- Our most important accomplishment was the creation and success of our Youth Garden Club. - North Valley Public Library

Community Garden sponsored by North Valley Public Library

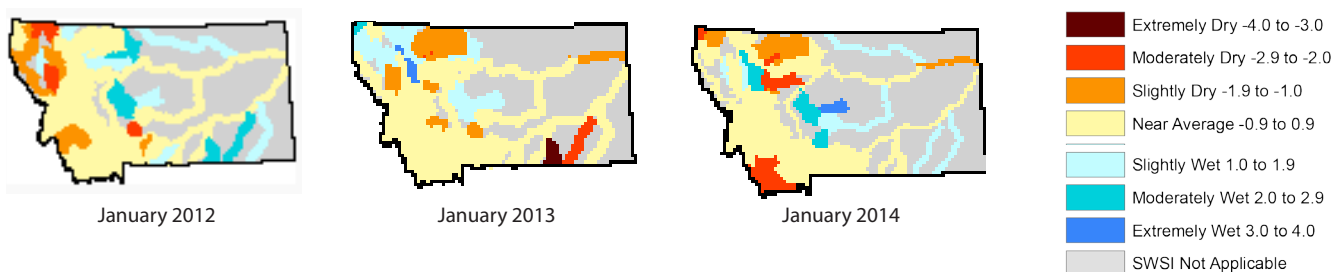

Montana's economy and way of life depend on the availability of water

Highlights

- The Draft State Water Plan is available at: http://dnrc.mt.gov/wrd/water_mgmt/state_water_plan/draft_mt_water_plan_low-res.pdf.
- The Water Information System (WIS) is the starting point for finding water resources information in Montana, such as data on surface water, groundwater, water quality, riparian areas, water rights, climate data and more; it is available at: http://geoinfo.msl.mt.gov/home/geography/water_information_system.aspx.
- The State Library works with the Natural Resource Conservation Service to publish monthly water supply maps. The current maps, along with an archive of monthly maps date back to 2002 (1992 for the Surface Water Supply Index maps) can be found at: http://mslapps.mt.gov/Geographic_information/Maps/watersupply/Default.aspx.
- Wetland Information Clearinghouse from the Department of Environmental Quality is available at: <http://deq.mt.gov/wqinfo/wetlands/default.mcp.x>.

Montana Water Supply Resources

The Montana Governor's Drought and Water Supply Advisory Committee is charged with monitoring, forecasting, and reporting water supply and moisture conditions, enabling Montanans to make timely and informed decisions to mitigate drought impacts in a proactive manner.

For historic analysis, up-to-date information, and maps on Montana's current drought situation, visit:

Montana's economy and way of life depend on the availability of water

Water Rights

The Department of Natural Resources and Conservation Water Adjudication Bureau assists the Montana Water Court in the adjudication of all claims to pre July 1, 1973 water rights. The Bureau examines all claims pursuant to Supreme Court rules and provides a summary report to the Water Court on each of the basins (85) in the state. Pursuant to legislation passed in 2005 the Bureau must complete the examination of the remaining 57,000 claims (as of 2005) by June 30, 2015. The map below shows the current status of the adjudication process. Visit http://dnrc.mt.gov/wrd/water_rts/.

Montana's management of lands and natural resources has a significant influence on our environment, economy, and our quality of life

Highlights

- Nearly 65% of land in Montana is privately owned; over 18% is owned by the U.S. Forest Service.
- Of the acres in private agricultural use, 64% or 38,787,058 acres are used for grazing; 3% are irrigated crops.
- Montana Fish, Wildlife and Parks has over 450,000 acres of wildlife management areas, over 41,000 acres of state parks, and over 21,000 acres of fishing access sites.
- The Montana Land Reliance holds over 910,000 acres in conservation easements; a total of over 2.2 million acres are in easements across the state.
- There are over 7,000 miles of energy pipeline.
- 17,095 active energy wells (coal bed methane, gas, oil, etc.) exist in the state.

Montana Field Guides

Common Loon *Gavia immer*

The Common Loon is a large and mainly aquatic bird. Common Loons are known for their distinctive calls, three of which are heard on summer breeding lakes. The wail—a long almost mournful cry; the tremolo—a high pitched, rapid, five-beat call; and probably the best known is the yodel which is given only by males during territorial confrontations.
