

Montana's Aquifer Characterization Study Areas - Map 13

Map 13 shows the 21 aquifer characterization study areas for the state. Study areas are based on county boundaries and on general watersheds. Shaded basins show where work is under way. A preliminary assessment report for the Glendive area of eastern Montana was produced in October 1994. This publication, MBMG Open-File Report 323, is available from the MBMG. For more information on the Assessment Program contact the MBMG.
